

# H2P OFFERS A COMPLETE PROGRAMME FOR THE CONTROL OF VECTOR-BORNE DISEASES

## PROTECT YOUR EMPLOYEES

### MALARIA

Malaria is a parasitic disease transmitted to humans between dusk and dawn by bites from the Anopheles mosquito. The Anopheles mosquito makes no noise and its bite is not painful. A single bite is enough. Malaria can be fatal if it is allowed to develop. The risk is mainly present in sub-Saharan Africa, even in towns. According to the WHO in 2012 malaria caused more than 600,000 deaths throughout the world.

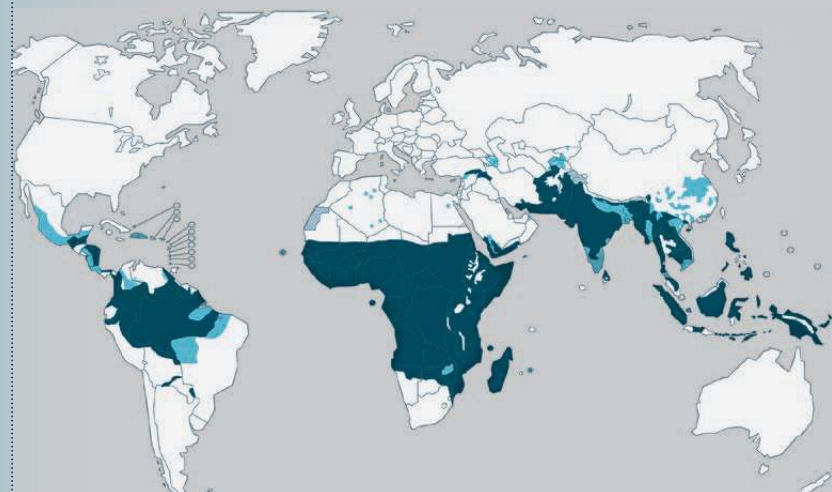

### ARBOVIRUS INFECTIONS

Chikungunya, dengue, West Nile virus, etc. are transmitted during the day by bites from various mosquitoes such as the Aedes or the tiger mosquito. They are acute in many countries and are responsible for fevers which can be followed by various complications. The only prevention is protection against bites.

## CHOOSING GOOD PROTECTION WITH SKIN2P BODY, SCREEN2P WEAR AND SCREEN2L LONG LASTING

*Skin2P Body and Screen2P Wear or Screen2L Long Lasting are effective against mosquitoes of the Aedes, Anopheles and Culex species, which are responsible for the transmission of diseases like dengue, chikungunya and malaria.*

### ZONES AFFECTED BY MALARIA

- Countries or zones where malaria is transmitted
- Countries or zones at risk of limited malaria transmission

Source : OMS

### THIS PROTECTION IS INTENDED FOR:

- Flight crews
- Military
- Remote sites personnel
- Health facilities
- Travellers

For optimum protection combining the skin repellent lotion, Skin2P Body, with a clothing insecticide, Screen2P Wear or Screen2L Long Lasting, is recommended.
